- 1. This is a numbered list.
 - (a) Different levels are distinguished by different numbering in LATEX.
 - (f) Now I changed the corresponding counter of LaTeXto 5 so the sign of this item is f which is the $6^{\rm th}$ character in the alphabet.
- The same can be told about ...
 - ... unnumbered lists.
 - | !!! | But, as you see, the label of an item can be changed freely. 1

Dictionaries: In dictionaries we use a third type of list in which a word or a phrase plays the role of the label of an item.

4th law of Maxwell:

$$\oint_{g} \mathbf{B} \cdot ds = \mu_{0} \int_{A} \left(\mathbf{J} + \epsilon_{0} \frac{\partial \mathbf{E}}{\partial t} \right) \cdot d\mathbf{A}$$
 (1)

 $^{^{1}}$ Note that the boxed (frame) exclamation marks the plasy the role of the label of that item.
